EDUCATION

DAMS, Alma mater studiorum

University of Bologna

DEI, Bologna

Extra departmental course of software development in C language

EXPERTISE

PROFESSIONAL

- Versatile
- Leadership and training
- High scalability oriented
- Easily autonomous

TECHNICAL

- React, Vue, Nextjs, Canvas API
- Git, node, sass, Electron, Laravel
- HTML, Tailwind
- Nodejs, PHP, mySQL
- Antigravity IDE

SUMMARY STATEMENT

I am a self-taught programmer with 13 year of experience who is drawn to the vast possibilities of software development. I began my journey by creating small applications and games using the C language. Eventually, I transitioned to web software development as it allowed for quicker results. I have worked with various agencies, primarily in the Milan area, before embarking on a freelance career based in Armenia, which has been filled with exciting experiences.

WORK EXPERIENCE

Founder and fullstack developer

Jan 2020 - Present

Entusiasta LLC / Armenia

As a freelancer I have worked on several generally large projects covering the role of lead developer and taking care of all the fundamental aspects.

- Core Frontend Developer at [Metodo StandUp](#), Italy's leading online addiction treatment platform. I led the development of the user interface, ensuring a high-performance, accessible, and secure digital environment for thousands of users.
- I created a business plan manager for [Campari Group](#), with 3 different types of users, maintaining a high level of scalability and participating where necessary in UX decisions. During this project I collaborated with [Pixelcrew](#).
- I developed a CMS in React divided into 4 different applications including a PWA for [TC2 Group](#). The software handles remote inspections and different communication modes, including socket chat and videocalls.
- I had the immense pleasure of developing a large platform launched by [Sicchè](#), for the management of market surveys. The application was developed in Angular. Highly scalable given the complexity of its features. During this project I collaborated with [Sinapto](#).
- For [Sifa](#) I was involved in the creation of an innovative large software, intended for the creation and management of diets. The software is also used today by the Sapienza University of Rome. During this project I collaborated with [Sinapto](#).
- Other experiences include small tools in Electron for [Vodafone](#) and responsive html + sass websites.

Personal projects

Personal projects are the heart of my career growth.

- In 2013 I embarked on the creation of an interactive short film "[Impatto ambientale](#)" financed by the Puglia Region, on the environmental theme. On this occasion I developed the software and wrote the story and the screenplay of the film.
- I developed a library-free HTML5 game inspired by Metroid, mastering core math and game development principles in the process. Building on that foundation, I continue to develop other games for personal enjoyment and technical experimentation.
- Many other projects can be found on [edoardocasella.it](#)
